SUMMARY

Java Backend Developer with hands-on experience building REST APIs and backend modules using Java, Spring Boot, Hibernate/JPA, MySQL, and Redis. Strong foundation in monolithic application architecture, API optimisation, CRUD workflows, database query improvement, and backend integration. Comfortable using AI coding tools including Codex and Claude to improve development speed, debugging, and code quality.

TECHNICAL SKILLS

Backend	Java, Spring Boot, Hibernate/JPA, REST APIs, Monolithic Architecture, JSON
Databases & Cache	MySQL, SQL, Redis, query optimization, CRUD operations
Frontend	Angular, JavaScript, HTML, CSS
Cloud & Storage	Amazon S3, Google Cloud Storage (GCS)
AI Tools	Codex, Claude

EXPERIENCE

Software Engineer | Knorex India | Mar 2024 - Present | Pune

Data-driven media broker solutions team

- Developed RESTful APIs using Java, Spring Boot, Hibernate/JPA, and MySQL for backend application modules.
- Implemented CRUD operations, optimized SQL queries, and improved backend API performance by reducing latency in key workflows.
  - Integrated Amazon S3, Google Cloud Storage (GCS), and Amazon SQS for file storage, asynchronous message processing, and scalable backend workflows.
  - Developed backend modules for user management, file processing, and service-layer business logic within a monolithic Spring Boot application.
  - Implemented Amazon SQS producers and consumers to process background tasks asynchronously, improving application scalability and reliability.
  - Collaborated with frontend developers to integrate React applications with REST APIs and troubleshoot end-to-end integration issues.
  - Performed testing, debugging, and bug fixes to improve the reliability and stability of production backend services.
  - Implemented FTP-based file upload functionality for secure file transfer and processing.
  - Developed an audit history feature to track and display user activity/history within the application.

PROJECTS

LibraryManagementSystem | Java,SpringBoot,Hibernate/JPA,MySQL,RESTAPIs

- Built a library operations platform with authentication, book search, and user management workflows.
- Designed REST API endpoints for sign-up, login, search, and library management features using a backend-focused architecture.
- Implemented database-backed CRUD functionality and structured backend logic for reliable data handling.

Beauty Bliss E-commerce Platform | Angular, JavaScript, HTML, CSS

- Developed an e-commerce web application inspired by Sugar Cosmetics with product browsing and cart workflows.
- Implemented admin product-management features, order history pages, and responsive user-facing interfaces.

EDUCATION

Full Stack Web Development | Masai School | Nov 2022 - Oct 2023 | Bengaluru

B.A. General | Calcutta University | Aug 2019 - Jun 2023 | Kolkata

ACHIEVEMENTS

- Optimized backend APIs, improving performance by 60% and reducing latency in selected workflows.
- Developed RESTful services using Java and Spring Boot, improving backend reliability and maintainability.
